

PUBLISSO Specialist Repository for Life Sciences

The place to publish scholarly
texts and research data

The PUBLISSO Specialist Repository for Life Sciences offers individual authors and academic institutions the chance to publish scholarly texts electronically for free under the green open access model (i.e. self-archiving in a repository after publication). We can also make academic theses and research data available in a digital format.

Institutions specialising in medicine, health, and nutritional, environmental and agricultural sciences can use this service to present their publications in a consistent format.

The PUBLISSO repository publishes the following:

- ▶ research reports
- ▶ conference and congress proceedings and papers
- ▶ scholarly books and book chapters
- ▶ scholarly journal articles under the green open access model (postprint/publisher's version-of-record)
- ▶ clinical practice guidelines
- ▶ academic theses including doctoral and postdoctoral theses and master's theses (not bachelor's theses)
- ▶ research data (e.g. measurements, video/audio recordings)

Scholarly publications in the PUBLISSO repository are

- ▶ made permanently available on the Internet while safeguarding the authors' copyright
- ▶ visible thanks to their incorporation in databases and subject portals that are accessible worldwide
- ▶ easily citable thanks to DOI and URN persistent identifiers
- ▶ permanently archived with guaranteed data security even during technical conversion

If you have any questions or would like to publish your work in the PUBLISSO repository, please feel free to get in touch!
